

■ Diamond Hand Leaderboard

Phase 1 MVP Report — Status, Options & Required Decision

STATUS	SCOPE	DATA REFRESH	API TIER
■ LIVE MVP	Top 5 BonkFund tokens	Every 15 minutes	Free / non-prioritized

WHAT THE LEADERBOARD DOES

The Diamond Hand Leaderboard reads public Solana blockchain data to rank token holders by a **conviction score** — a combination of how long they have held and how much they hold, with a multiplier for wallets that have never sold. It surfaces on-chain proof of loyalty that no marketing claim can fabricate.

For traders, a project with many long-term holders who have not sold through volatility is a **genuine buy signal**. This tool makes that signal visible, sortable, and shareable.

PHASE 2 — THREE STRATEGIC OPTIONS

The MVP validates the concept. The next phase requires a **product identity decision**. Architecture, cost, and go-to-market differ significantly across options. This cannot be deferred.

OPTION	WHAT IT IS	PROS	CONS	COMPLEXITY
A Full Solana Ecosystem Scanner	Market-wide leaderboard across all Solana tokens. Competes with analytics dashboards.	Max coverage High scalability	High infra cost High complexity Less differentiated	■ HIGH
B Holder-Gated Utility Tool	Access gated to token holders (e.g. \$200+ balance). Leaderboard as a holding incentive.	Strengthens token Exclusivity loop Low scaling pressure	Smaller user base Slower growth	■ MEDIUM
C Professional Trader Tool	SaaS trading intelligence product. Subscription-based. Accuracy and reliability as core promise.	Clear revenue path High-value users Strong positioning	Highest reliability bar Immediate backend upgrade required	■ HIGH

TECHNICAL REALITY — APPLIES TO ALL OPTIONS

Current API	Free, non-prioritized — sufficient for MVP validation only. Not production-grade.
To scale	Migration to professional Solana data provider (paid). Caching + rate-limit protection. Backend redesign for load.
Recommendation	Do NOT upgrade infrastructure before the strategic decision is made. Premature scaling locks in cost and complexity before the product identity is clear.

■■ THE NEXT STEP IS ON THE FOUNDERS.

Engineering cannot proceed without a product direction. The three options above lead to fundamentally different architectures, cost structures, and go-to-market strategies. Choosing the wrong one wastes months of build time.

What is needed from the founders — this week:

1. Select Option A, B, or C as the Phase 2 direction.
2. Confirm the budget envelope for infrastructure upgrade.
3. Define the target user (community holder vs. external trader).

Until this decision is made, the product is at a standstill. The MVP is live and validated. **The ball is in your court.**
